

ANTONIO VENTILII

Senior software engineer shipping production systems in TypeScript, Rust, and Python across Web3 and traditional finance, including a flagship wallet whose full codebase is public on GitHub. AI-native workflow: orchestrating fleets of coding agents across many parallel projects, with custom agent skills and MCP connectors, while still owning architecture, the hard code, and every review.

DFINITY Foundation

ZURICH, SWITZERLAND

Senior Software Engineer

2024 – PRESENT

OISY Wallet (Apache-2.0): production, multi-chain browser wallet on the Internet Computer (TypeScript, Svelte, Rust canisters, chain fusion). Fully public development on GitHub; primary contributor by commit volume (AntonioVentilii; older commits on the repo may still appear under a retired foundation-linked login for the same person). Also collaborates on other foundation initiatives and partner-facing engineering.

- **Solana (mainnet & devnet):** extended the product to SOL and SPL (send, receive, balances/history) with correct account and transaction semantics; integrated chain-key signing paths that differ materially from Bitcoin and Ethereum.
- **EVM scale-out:** shipped Base, Polygon, Arbitrum, and BSC behind one extensible integration pattern and documented how to add further chains.
- **In-wallet services:** swap flows via NEAR Intents (Solana and EVMs) through a pluggable provider model; fiat on-ramp via Onramper (buy crypto without leaving the wallet).
- **Performance / architecture:** moved transaction loading (pagination, caching, persistence) and exchange-rate refresh into canisters with scheduled jobs, reducing browser work and stabilizing UI under real usage.
- **Security / abuse:** rate limits on sensitive endpoints; Internet Identity delegation-chain validation so backend requests align with the legitimate frontend.
- **Product, leadership, tooling:** currency and language preferences and token-list performance work; before a team restructure, owned technical direction, planning, and mentoring; introduced a shared ESLint setup (strict + custom rules) reused across foundation repos; coding agents used heavily for implementation and review.

Vontobel Swiss Financial Advisers AG

ZURICH, SWITZERLAND

(former UBS Swiss Financial Advisers AG)

Desk Developer / Senior Multi-Asset Trader

2020 – 2024

- Cut time on repetitive desk operations from about eight hours to about two hours per day by consolidating work into automation and internal tools; redirected capacity to new builds, controls, execution quality, and trading. Representative software deliverables:
 - Flask API and React web app for rule-based asset screening and analysis, used across **four** teams.
 - FX book end-of-day hedge optimisation (linear programming), cutting related market fees by about **40%**.
 - Python package automating the booking GUI, eliminating manual steps across **7–8** recurring desk workflows; data pipeline for Bloomberg and third-party market data; internal/external API wrappers.
 - Git-based workflows, testing, and DevOps practices adopted desk-wide.
- Executed trades on multi-asset markets (Fixed Income, FX, Equity, Structured Products, Derivatives) for HNWI and UHNWI clients.

Banco Itaú (Suisse) S.A.

ZURICH, SWITZERLAND

Senior Trader / Desk Developer

2019 – 2020

- Led projects to improve trading operations and controls through coding, including:
 - Scraper tooling to automate trading of Certificates of Deposit.
 - Stronger desk controls via automated data collection and analysis (booking, pricing, P&L reporting).
- Executed trades on multi-asset markets (Fixed Income, FX, Equity) for HNWI and UHNWI clients, including derivatives and structured products.
- Designed and proposed trade ideas for Direct Access clients, including new products in Derivatives and Fixed Income.

StoneCo Ltd. Desk Developer / Financial Specialist of Treasury & Risk	SÃO PAULO, BRAZIL 2018 – 2019
• Led automated IPO controls with engineering teams; market-risk tooling integrating internal data; market data from Bloomberg, Yahoo, APIs, and scraping. • Agile (Scrum); Docker/venv and CI/CD with automated tests. • Treasury hedging and IPO proceeds; risk and hedge-account policies for ALCO; market-risk data for regulatory filing (F1).	
Itaú Unibanco S.A. Trader at Volatility Trading Desk	SÃO PAULO, BRAZIL 2013 – 2016
• Ran trading flow on the Volatility and International Trading desks: flow pricing, proprietary risk, and internal client coverage. • Co-developed book controls and a centralised Volatility database (SQL, C#) consolidating data across desk books. • Improved desk automation with layered security and redundancy.	

TECH STACK

Languages: TypeScript, JavaScript, Python, Rust, Solidity, SQL, C++, C#, Elixir
Frontend: Svelte / SvelteKit, React.js / React Native, Tailwind CSS, Vite
AI / agentic: coding agents (Claude Code) for implementation and review, custom agent skills, MCP connectors, multi-agent workflows
Web3 / ICP: Internet Computer (canisters), EVM, WalletConnect, Internet Identity, chain-key crypto
Backend, data, finance feeds: REST APIs, Postgres, MongoDB, MySQL / SQLite, Bloomberg, Reuters
Platforms & quality: Linux / Ubuntu, Windows, macOS, Docker, GCP, Fly.io, Git (GitHub, GitLab, BitBucket), Vitest, Playwright, CI/CD

PERSONAL PROJECTS

Products (TypeScript): OmbrellOne - live beach-umbrella booking marketplace (ombrell.one): email-OTP and Google auth, listings with photo uploads, Stripe payments where the platform never holds host funds; started on the Internet Computer (Motoko, React), ported to Bun + Elysia + Postgres on Fly.io; **ventilii-graph** - this CV as an interactive career map at ventilii.dev (Svelte 5, Tailwind CSS v4).
AI / agentic: Privatim - sovereign AI for private banking on the Internet Computer: role-gated CRM, hash-chained audit log, AI assistant canister calling an LLM on an attached GPU node, with canister-built citations; **claude-skills** - version-controlled Claude Code agent skills, ready to double as a team plugin marketplace; **Workday AI Control Plane** - developer-AI platform concept: pooled team budgets, quota governance, and provider routing over LLMs behind one stable API.
Blockchain / Rust: icdc-core - ICP canisters exploring clearing-style flows (Rust); **escrow** - smart-contract escrow with web UI (Solidity, React).
Python / APIs: deribit-wrapper - Deribit API client in Python (market data, trading, accounts); 20 GitHub stars / 5 forks; **bitcoin-utxo-lp** - Bitcoin UTXO coin-selection via LP/MILP optimisation.

EDUCATION

University of São Paulo Master's Degree in Aeronautics Engineering International Exchange	SÃO PAULO, BRAZIL 2012 - 2013
Politecnico di Milano Master's Degree in Aeronautics Engineering 2-year merit-based scholarship	MILAN, ITALY 2011 - 2013
Politecnico di Milano Bachelor's Degree in Aerospace Engineering 3-year merit-based scholarship	MILAN, ITALY 2008 - 2011
