Antonio Ventilii

Senior software engineer shipping production systems in TypeScript, Rust, and Python across Web3 and traditional finance, including a flagship wallet whose full codebase is public on GitHub. Works with modern tooling, including AI-assisted development. Emphasis on code review, maintainability, and idiomatic code that matches current practice.

Personal Info

Date of Birth:	17/06/1989
Nationality:	Italian

Languages

Italian:	Native
Portuguese:	Fluent
English:	Fluent
German:	Elementary

Work Experience

DFINITY Foundation — Zurich, Switzerland
Senior Software Engineer — 2024 – Present

OISY Wallet (Apache-2.0): production, multi-chain browser wallet on the Internet Computer (TypeScript, Svelte, Rust canisters, chain fusion). Fully public development on GitHub; primary contributor by commit volume (AntonioVentilii; older commits on the repo may still appear under a retired foundation-linked login for the same person). Also collaborates on other foundation initiatives and partner-facing engineering.

- **Solana (mainnet & devnet):** extended the product to SOL and SPL (send, receive, balances/history) with correct account and transaction semantics; integrated chain-key signing paths that differ materially from Bitcoin and Ethereum.
- **EVM scale-out:** shipped Base, Polygon, Arbitrum, and BSC behind one extensible integration pattern and documented how to add further chains.
- **In-wallet services:** swap flows via NEAR Intents (Solana and EVMs) through a pluggable provider model; fiat on-ramp via Onramper (buy crypto without leaving the wallet).
- **Performance / architecture:** moved transaction loading (pagination, caching, persistence) and exchange-rate refresh into canisters with scheduled jobs, reducing browser work and stabilizing UI under real usage.
- **Security / abuse:** rate limits on sensitive endpoints; Internet Identity delegation-chain validation so backend requests align with the legitimate frontend.
- **Product, leadership, tooling:** currency and language preferences and token-list performance work; before a team restructure, owned technical direction, planning, and mentoring; introduced a shared ESLint setup (strict + custom rules) reused across foundation repos; coding agents used heavily for implementation and review.

Vontobel Swiss Financial Advisers AG — Zurich, Switzerland
(former UBS Swiss Financial Advisers AG)
Desk Developer / Senior Multi-Asset Trader — 2020 – 2024

- Cut time on repetitive desk operations from about eight hours to about two hours per day by consolidating work into automation and internal tools; redirected capacity to new builds, controls, execution quality, and trading. Representative software deliverables:
  - Flask API and React web app for rule-based asset screening and analysis, used across **four** teams.
  - FX book end-of-day hedge optimisation (linear programming), cutting related market fees by about **40%**.
  - Python package automating the booking GUI, eliminating manual steps across **7–8** recurring desk workflows; data pipeline for Bloomberg and third-party market data; internal/external API wrappers.
  - Git-based workflows, testing, and DevOps practices adopted desk-wide.
- Executed trades on multi-asset markets (Fixed Income, FX, Equity, Structured Products, Derivatives) for HNWI and UHNWI clients.

Banco Itaú (Suisse) S.A. — Zurich, Switzerland
Senior Trader / Desk Developer — 2019 – 2020

- Led projects to improve trading operations and controls through coding, including:
  - Scraper tooling to automate trading of Certificates of Deposit.
  - Stronger desk controls via automated data collection and analysis (booking, pricing, P&L reporting).
- Executed trades on multi-asset markets (Fixed Income, FX, Equity) for HNWI and UHNWI clients, including derivatives and structured products.
- Designed and proposed trade ideas for Direct Access clients, including new products in Derivatives and Fixed Income.

StoneCo Ltd. São Paulo, Brazil
Desk Developer / Financial Specialist of Treasury & Risk 2018 – 2019

- Led automated IPO controls with engineering teams; market-risk tooling integrating internal data; market data from Bloomberg, Yahoo, APIs, and scraping.
- Agile (Scrum); Docker/venv and CI/CD with automated tests.
- Treasury hedging and IPO proceeds; risk and hedge-account policies for ALCO; market-risk data for regulatory filing (F1).

Itaú Unibanco S.A. São Paulo, Brazil
Trader at Volatility Trading Desk 2013 – 2016

- Ran trading flow on the Volatility and International Trading desks: flow pricing, proprietary risk, and internal client coverage.
- Co-developed book controls and a centralised Volatility database (SQL, C#) consolidating data across desk books.
- Improved desk automation with layered security and redundancy.

Tech Stack

Languages: TypeScript, JavaScript, Python, Rust, Solidity, SQL, C++, C#, VBA, LaTeX
Frontend: Svelte, React.js / React Native, Vite
Web3 / ICP: Internet Computer (canisters), EVM, WalletConnect, Internet Identity, chain-key crypto
Backend, data, finance feeds: REST APIs, MongoDB, MySQL / SQLite, Access, Bloomberg, Reuters
Platforms & quality: Linux / Ubuntu, Windows, macOS, Docker, GCP, Git (GitHub, GitLab, BitBucket), Vitest, Playwright, CI/CD, coding agents

Personal Projects

Blockchain / Rust: icdc-core - ICP canisters exploring clearing-style flows (Rust); **escrow** - smart-contract escrow with web UI (Solidity, React).
Python / APIs: deribit-wrapper - Deribit API client in Python (market data, trading, accounts); 20 GitHub stars / 5 forks; **CHaDitt** - WhatsApp audio → transcription / translation via an AI model (Flask, webhooks); **whatsapp-wrapper** - WhatsApp Cloud API with Firestore-backed message storage.
Other (often 2–3 developers): CryptoVol Robot - Deribit + Telegram volatility bot; **3-Way Arbitrage** - cross-venue arbitrage (Kraken); **RetroPandaClub NFT** - NFT contracts (Solidity, Rust); **Treasure Hunt Bot** - Telegram puzzle bot.

Education

University of São Paulo São Paulo, Brazil
Master's Degree in Aeronautics Engineering 2012 - 2013
International Exchange

Politecnico di Milano Milan, Italy
Master's Degree in Aeronautics Engineering 2011 - 2013
2-year merit-based scholarship

Politecnico di Milano Milan, Italy
Bachelor's Degree in Aerospace Engineering 2008 - 2011
3-year merit-based scholarship
