

Antonio Ventilii

Senior software engineer shipping production systems in TypeScript, Rust, and Python across Web3 and traditional finance, including a flagship wallet whose full codebase is public on GitHub. AI-native workflow: orchestrating fleets of coding agents across many parallel projects, with custom agent skills and MCP connectors, while still owning architecture, the hard code, and every review.

German:	Elementary

Work Experience

DFINITY Foundation — Zurich, Switzerland
Senior Software Engineer — 2024 – Present

OISY Wallet (Apache-2.0): production, multi-chain browser wallet on the Internet Computer (TypeScript, Svelte, Rust canisters, chain fusion). Fully public development on GitHub; primary contributor by commit volume (AntonioVentilii, plus a retired foundation login); also works on other foundation initiatives and partner-facing engineering.

- **Solana (mainnet & devnet):** extended the product to SOL and SPL (send, receive, balances/history) with correct account and transaction semantics; integrated chain-key signing paths that differ materially from Bitcoin and Ethereum.
- **EVM scale-out:** shipped Base, Polygon, Arbitrum, and BSC behind one extensible integration pattern and documented how to add further chains.
- **In-wallet services:** swap flows via NEAR Intents (Solana and EVMs) through a pluggable provider model; fiat on-ramp via Onramper (buy crypto without leaving the wallet).
- **Performance / architecture:** moved transaction loading (pagination, caching, persistence) and exchange-rate refresh into canisters with scheduled jobs, stabilizing the UI under real usage.
- **Security / abuse:** rate limits on sensitive endpoints; Internet Identity delegation-chain validation so backend requests align with the legitimate frontend.
- **AI assistant (live, beta):** contributed to the in-wallet LLM assistant on DFINITY's on-chain LLM canister (function calling for sends, contacts, balances, all user-confirmed): chat console refactor, send-flow hardening, canister bindings.
- **Leadership, tooling:** owned the team's technical direction, planning, and mentoring; introduced a shared ESLint setup (strict + custom rules) reused across foundation repos.

Vontobel Swiss Financial Advisers AG — Zurich, Switzerland
(former UBS Swiss Financial Advisers AG)
Desk Developer / Senior Multi-Asset Trader — 2020 – 2024

- Cut time on repetitive desk operations from about eight hours to about two hours per day by consolidating work into automation and internal tools; redirected capacity to new builds, controls, execution quality, and trading, including:
  - Flask API and React web app for rule-based asset screening and analysis, used across **four** teams.
  - FX book end-of-day hedge optimisation (linear programming), cutting related market fees by about **40%**.
  - Python package automating the booking GUI, eliminating manual steps across **7–8** recurring desk workflows; data pipeline for Bloomberg and third-party market data; internal/external API wrappers.
  - Git-based workflows, testing, and DevOps practices adopted desk-wide.
- Executed trades on multi-asset markets (Fixed Income, FX, Equity, Structured Products, Derivatives) for HNWI and UHNWI clients.

Banco Itaú (Suisse) S.A. — Zurich, Switzerland
Senior Trader / Desk Developer — 2019 – 2020

- Led projects to improve trading operations and controls through coding, including:
  - Scraper tooling to automate trading of Certificates of Deposit.
  - Stronger desk controls via automated data collection and analysis (booking, pricing, P&L reporting).
- Executed trades on multi-asset markets (Fixed Income, FX, Equity) for HNWI and UHNWI clients, including derivatives and structured products.
- Designed and proposed trade ideas for Direct Access clients, including new products in Derivatives and Fixed Income.

StoneCo Ltd. São Paulo, Brazil
Desk Developer / Financial Specialist of Treasury & Risk 2018 – 2019

- Led automated IPO controls with engineering teams; market-risk tooling integrating internal data; market data from Bloomberg, Yahoo, APIs, and scraping.
- Agile (Scrum); Docker/venv and CI/CD with automated tests.
- Treasury hedging and IPO proceeds; risk and hedge-account policies for ALCO; market-risk data for regulatory filing (F1).

Itaú Unibanco S.A. São Paulo, Brazil
Trader at Volatility Trading Desk 2013 – 2016

- Ran trading flow on the Volatility and International Trading desks: flow pricing, proprietary risk, and internal client coverage.
- Co-developed book controls and a centralised Volatility database (SQL, C#) consolidating data across desk books.
- Improved desk automation with layered security and redundancy.

Tech Stack

Languages: TypeScript, JavaScript, Python, Rust, Solidity, SQL, C++, C#, LaTeX
Frontend: Svelte / SvelteKit, React.js / React Native, Tailwind CSS, Vite
AI / agentic: coding agents (Claude Code) for implementation and review, custom agent skills, MCP connectors, multi-agent workflows
Web3 / ICP: Internet Computer (canisters), EVM, WalletConnect, Internet Identity, chain-key crypto
Backend, data, finance feeds: REST APIs, Postgres, MongoDB, MySQL / SQLite, Bloomberg, Reuters
Platforms & quality: Linux / Ubuntu, Windows, macOS, Docker, GCP, Fly.io, Git (GitHub, GitLab, BitBucket), Vitest, Playwright, CI/CD

Personal Projects

Products (TypeScript): OmbrellOne - live beach-umbrella booking marketplace (ombrell.one): email-OTP and Google auth, photo listings, Stripe payments where the platform never holds host funds (Bun + Elysia + Postgres on Fly.io); **ventilii-graph** - this CV as an interactive career map at ventilii.dev (Svelte 5, Tailwind CSS v4).
AI / agentic: Officina - agent software workshop on a GitHub repo (in use since Sep 2026): a change described in plain language is interviewed, specced, built and reviewed by seven Claude agent roles on Anthropic Managed Agents; people approve and merge; typed results validated in code, append-only audit log, agents never merge their own work; **Household app** (private, daily use) - own MCP server behind an OAuth 2.1 server, so Claude and ChatGPT connect as clients; agents propose typed changes, people commit them; **Privatim** - sovereign AI for private banking on the Internet Computer: role-gated CRM, hash-chained audit log, LLM assistant with citations; **claude-skills** - version-controlled Claude Code agent skills.
Blockchain / Rust: icdc-core - IC Derivatives Clearing: multi-canister central-counterparty engine in Rust (margin, order matching with partial fills, settlement), on mainnet as the backend of VICI's markets; PocketIC tests, CI to staging and production; **VICI** - social prediction-markets app live at vici.market since Feb 2026: one SvelteKit codebase, a web3 build on the Internet Computer and a web2 build on Fly.io with custodial multi-chain accounts, 70+ releases; **escrow** - Solidity escrow with a React UI.
Python / APIs: deribit-wrapper - Deribit API client in Python (market data, trading, accounts); 20 GitHub stars / 5 forks; **bitcoin-utxo-lp** - Bitcoin UTXO coin-selection via LP/MILP optimisation.

Education

University of São Paulo São Paulo, Brazil
Master's Degree in Aeronautics Engineering 2012 - 2013
International Exchange

Politecnico di Milano Milan, Italy
Master's Degree in Aeronautics Engineering 2011 - 2013
2-year merit-based scholarship

Politecnico di Milano Milan, Italy
Bachelor's Degree in Aerospace Engineering 2008 - 2011
3-year merit-based scholarship
